

# AI BASED ATTENDANCE SYSTEM

## Submitted to

Smt. Chandaben Mohanbhai Patel Institute Of Computer Application

## Prepared By

Kushal Adeshra (19BCA056)  
Shivam Barot (19BCA057)  
Harshil Suthar (19BCA058)

## Guide By

Dr. Kanubhai Patel

# Agenda

- ▶ System Introduction
  - ▶ Aim of the system
  - ▶ Scope of the system
  - ▶ Tools/Technology used in system
- ▶ Software Requirement Specification
  - ▶ Functionality
- ▶ Functional Requirement
- ▶ System Design
- ▶ System Implementation
- ▶ System Testing
- ▶ Conclusion
- ▶ Limitation and Future Enhancement
- ▶ Reference

# **SYSTEM INTRODUCTION**

# Aim Of The System

- ▶ This project aims to automate the traditional attendance system where the attendance is marked manually.
- ▶ It also enables an organization to maintain its records like in-time, out time, break time and attendance digitally. Digitalization of the system would also help in better visualization of the data using graphs to display the no. of employees present today, total work hours of each employee and their break time. Its added features serve as an efficient upgrade and replacement over the traditional attendance system.

# Scope Of The System

- ▶ Facial recognition is becoming more prominent in our society. It has made major progress in the field of security. It is a very effective tool that can help law enforcers to recognize criminals and software companies are leveraging the technology to help users access the technology.
- ▶ This technology can be further developed to be used in other avenues such as ATMs, accessing confidential files, or other sensitive materials.

# Tools/Technology/Platform

## ▶ Technology

- Django
- OpenCV
- Dlib
- Open-Source Face Recognition Library
- SQLITE Database.
- JavaScript
- Bootstrap

## ▶ Tools

- PyCharm

## ▶ Platform

- Windows

# **Software Requirement Specification**

# Functionality

- ▶ We have 2 types of user in the system
  - ▶ Employee
  - ▶ Admin
- ▶ Following are the functionality which can be performed by Admin
  - ▶ Login
  - ▶ Register new employees to the system
  - ▶ Add employee photo to the training data set
  - ▶ Train the model
  - ▶ View attendance report of all employee. Attendance can be filtered by date or employee.

- 
- ▶ Following are the functionality which can be performed by Employee
    - ▶ Login
    - ▶ Mark his/her time-in and time-out by scanning their face
    - ▶ View the attendance report of themselves.

# Functional Requirement

# Manage Login and Registration

## ▶ Register New Employee

Description: Admin can register new

Input: Employee Details

Output: success message displaying the user has been created.

## ▶ Log into the system

Input: User credentials

Output: If the credentials are correct, user will be redirected to the dashboard of the system

Exception Flow: If the entered credentials are incorrect then user will be redirected to the login page again displaying an error message.

# Manage Attendance Details

- ▶ Mark your attendance-in

Input: User will scan his/her face using the external web camera.

Output: system will identify the user uniquely and will mark his/her in-time to the database. The same success message will be transmitted to the user.

- ▶ Mark your attendance-out

Input: User will scan his/her face using the external web camera.

Output: system will identify the user uniquely and will mark his/her out-time to the database. The same success message will be transmitted to the user.

### ► View my attendance report

Description: Employee may often need to see his / her attendance record throughout the month or year. Using this feature one can see his / her attendance record till the date.

Input: User selection

Output: Statistical analytics of the particular employee who is currently logged into the system will be displayed.

### ► View employee's attendance report

Description: This feature is for admin. Admin can monitor the availability of each employee till the date. i.e., how many employees are present today out of total employees etc. can be monitored.

Input: user selection

Output: Attendance record of each employee including how many employees are present today out of total along with the availability graph.

# Manage Employee Details

## ► Add photo of the employee

Description: Admin only can access this feature. Admin can add a photo of an employee during the registration process.

Input: Username of an employee

Output: Success message record has been added.

Process: System will process an image and will generate necessary system data to identify each employee uniquely.

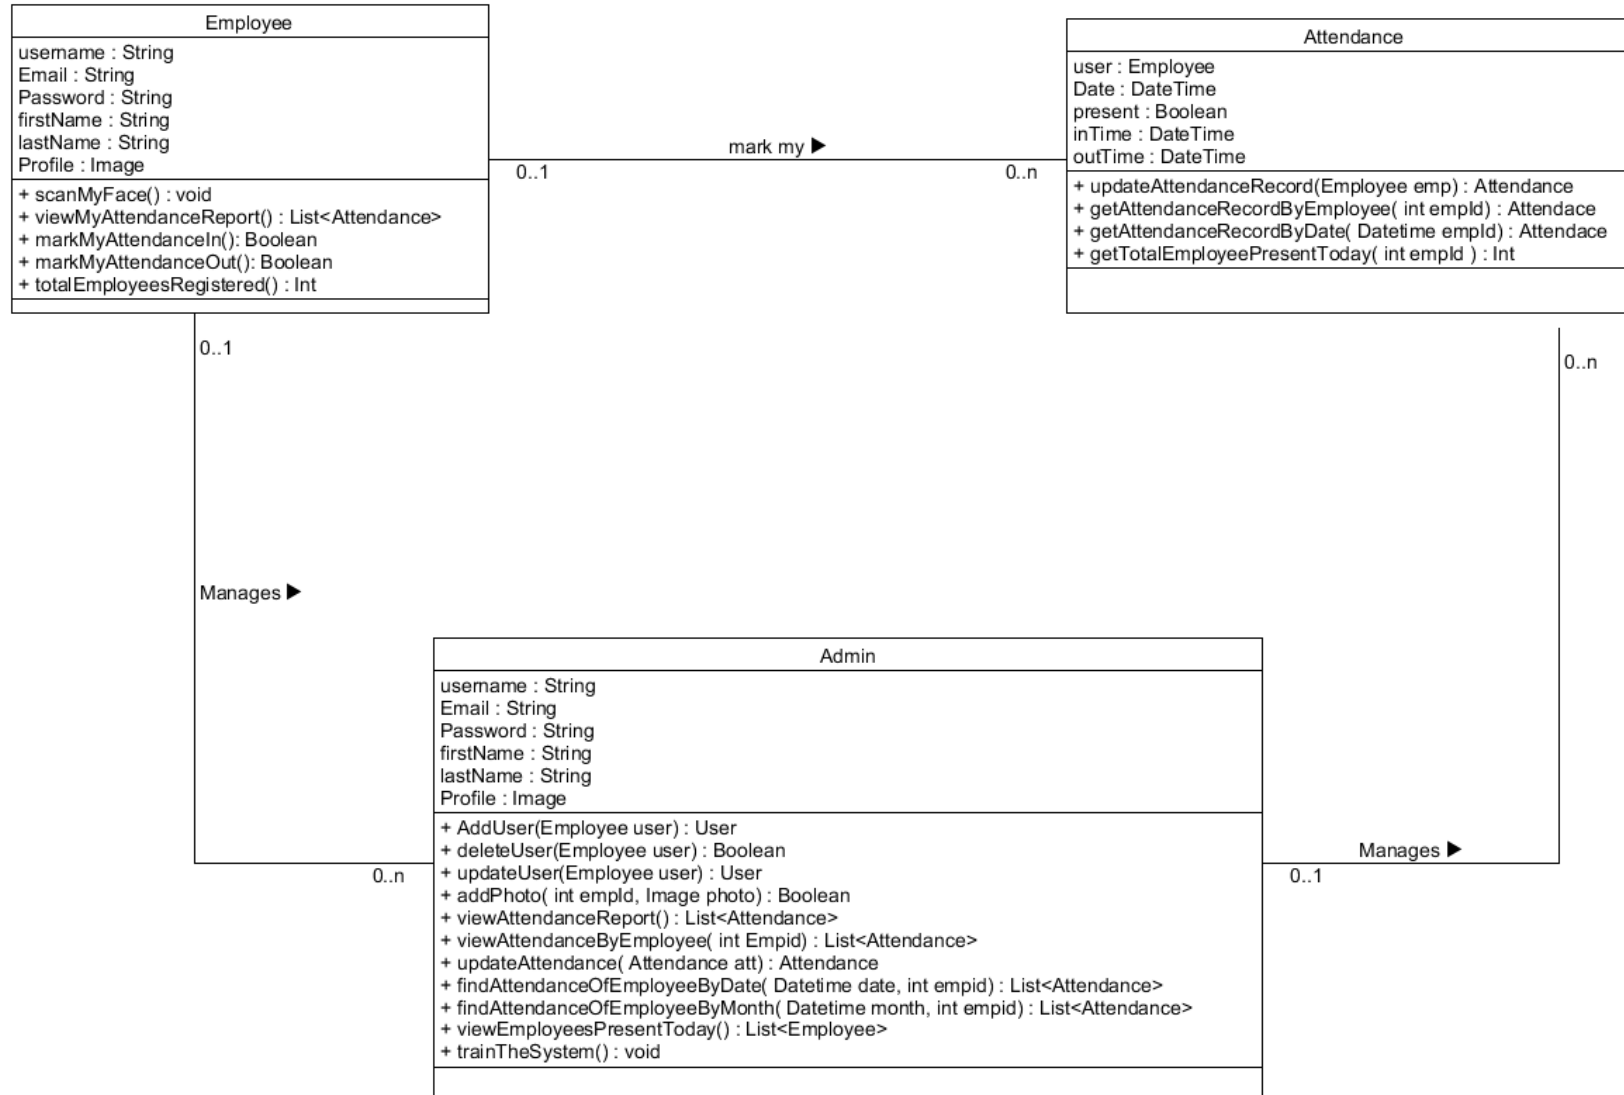

## ► Train the system

Input: user selection

Output: system will process all the available records of the employees and will generate necessary system data to identify each employee uniquely.

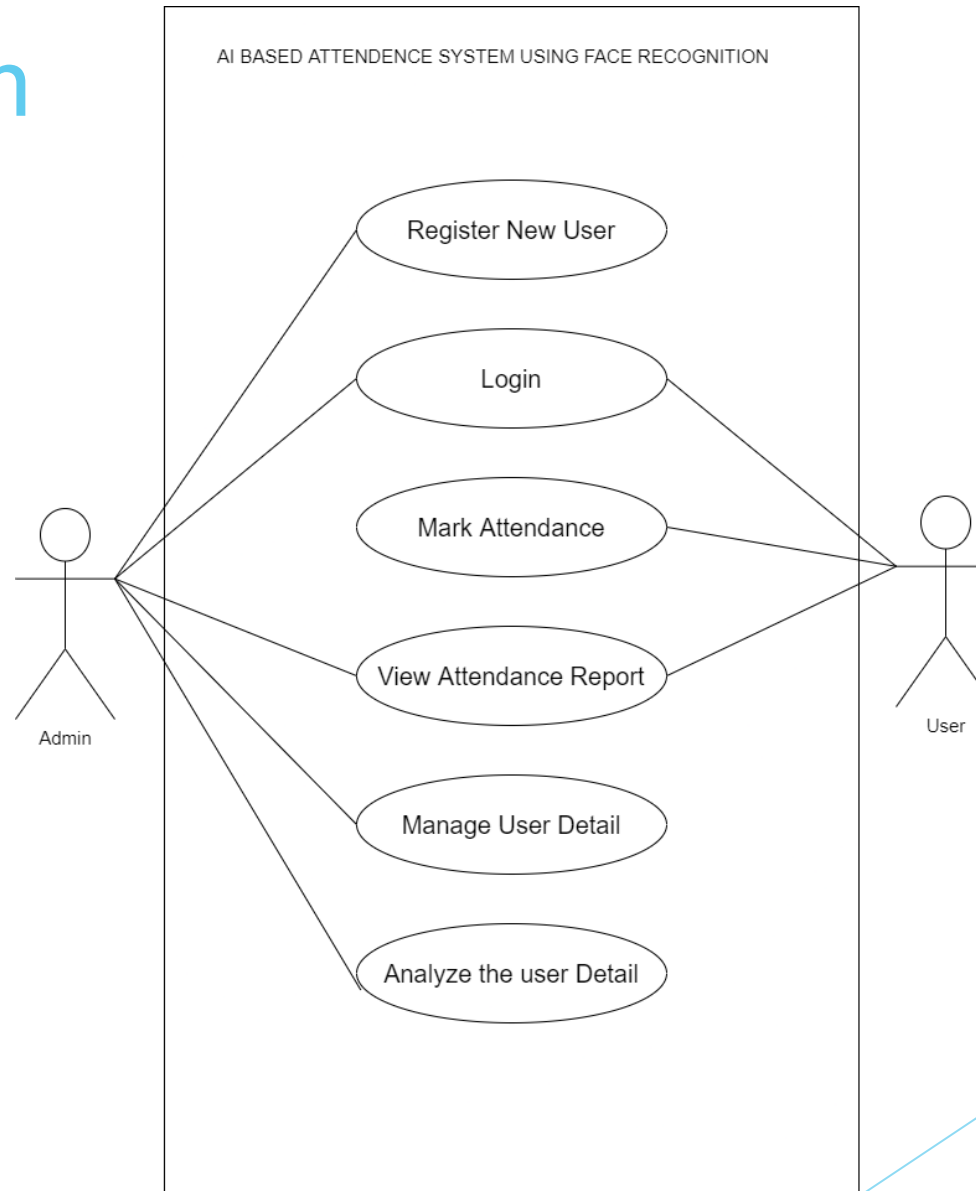

# **System Design**

# Class Diagram

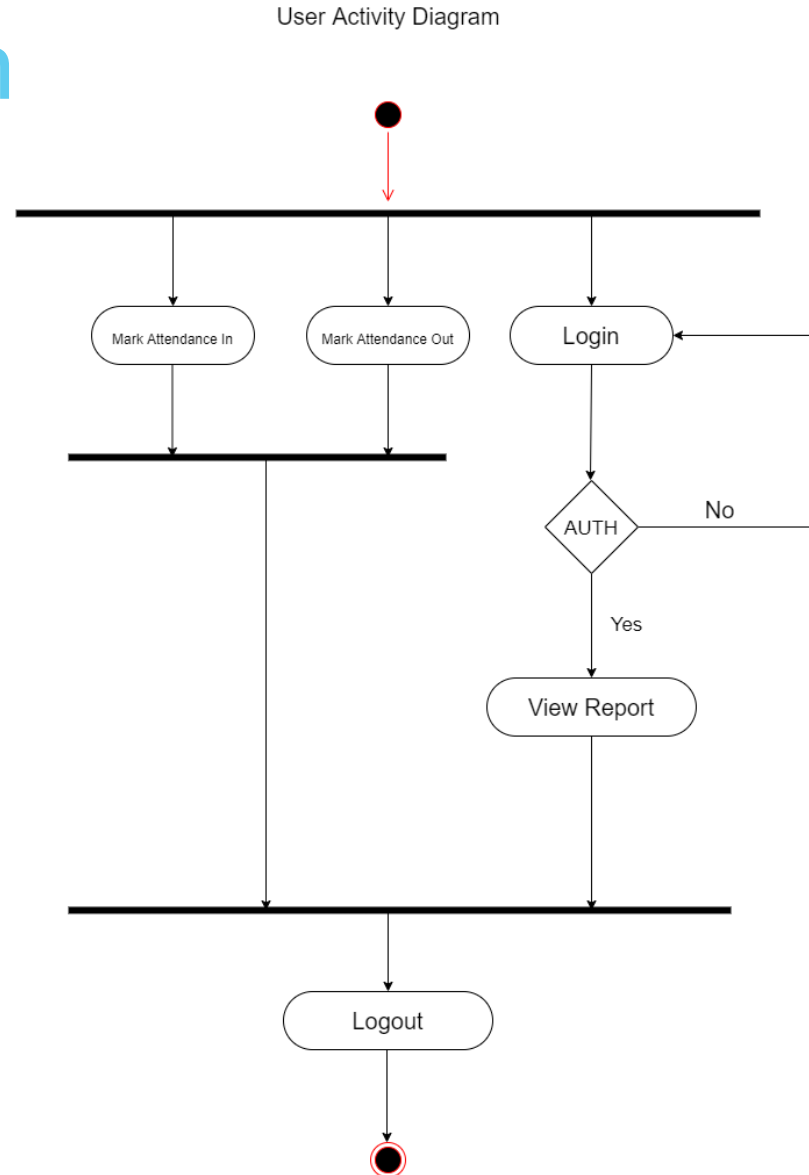

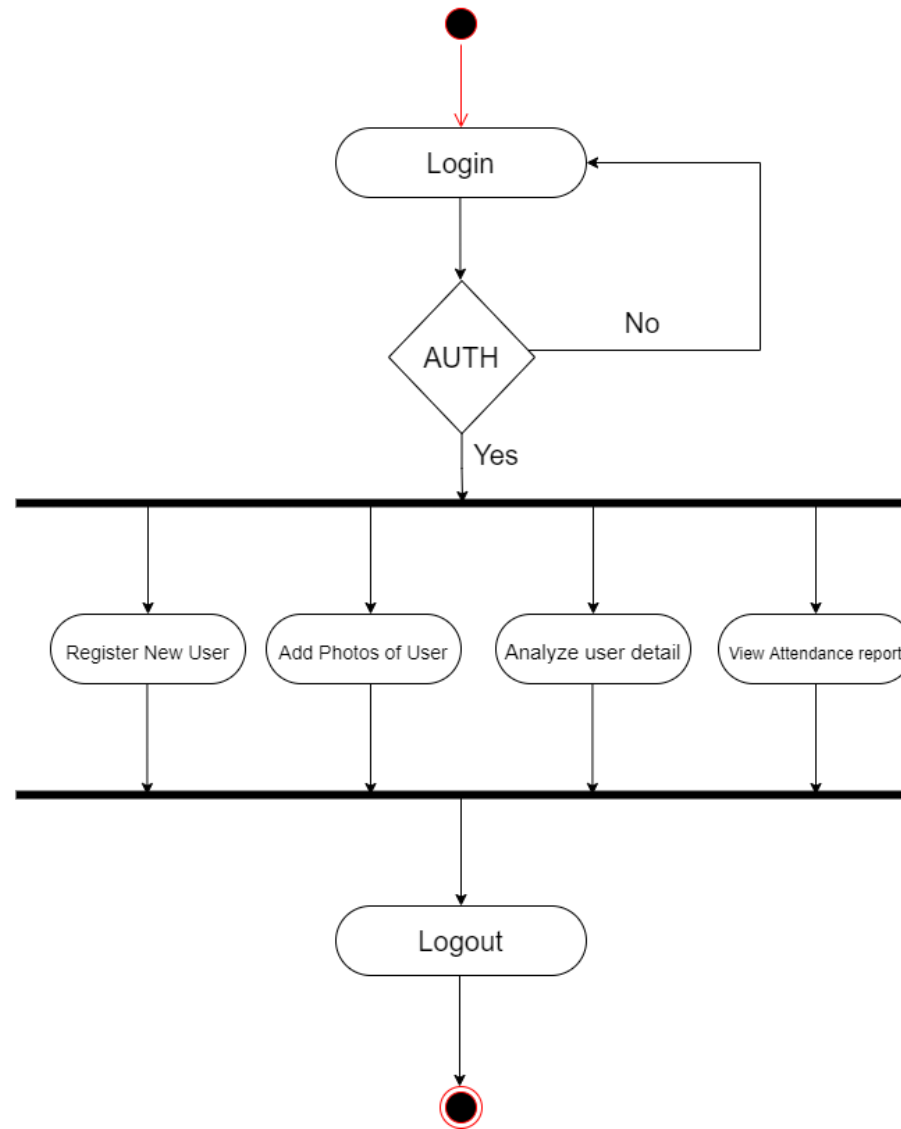

# Use Case Diagram

# Activity Diagram

Admin Activity Diagram

# Data Dictionary

## ► USER

NO	Field Name	Data Type	Required	Unique	PK/Fk	Ref.Table
1	UserID	Int	True	True	PK	-
2	Email	String	True	True	-	-
3	Name	String	True	False	-	-
4	Password	String	True	False	-	-
5	CreateAt	Datetime	True	False	-	-
7	UpdateAt	Datetime	true	False	-	-

## ► Present

No	Field name	Data type	Required	Unique	PK/Fk	Ref.Table
1	Pid	Int	true	True	PK	–
2	Date	Datetime	True	False	–	–
3	User	User	True	False	FK	Users
4	Present	Boolean	true	false	–	–

## ► Time

No	Field name	Data type	Required	Unique	PK/Fk	Ref.Table
1	Tid	Int	True	true	PK	-
2	Date	Datetime	True	True	-	-
3	User	Users	True	False	FK	Users
4	Time	Datetime	False	False	-	-
5	out	Boolean	True	False	-	-

# **System Implementation**

# Modules

## ▶ Registration and login modules

This module mainly deals with the functionalities related to the registration of any new employee to the organization, Log into the system and managing employee's profile details. Using features provided by this module admin can register new employee to the system and admin / employee both can log into the system using their credentials.

## ► Manage Attendance Details

This module mainly deals with the features related to the employee's attendance. Using this employee can mark their presence, time-in and time-out in the system. Admin can see the availability report of each employee, employee can see his/her attendance report along with some possible filters such as filter by employee and filter by date.

## ► Manage Employee Details

This module mainly deals with the features related to the employee's profile. Using this admin can add a photo of the newly registered employee during registration. Admin can also command the system explicitly to train the model and system will make necessary calculation and will generate some data which will be used internally to identify each employee uniquely.

► Function prototypes which implement major functionality

- `List<Attendance> viewMyAttendanceReport(int empld);`
- `Int totalEmployeesRegistered();`
- `List<Attendance> getAttendanceRecordByEmployee(int empid);`
- `Boolean updateAttendanceRecord(int empid, Attendance update);`
- `Boolean registerEmployee(Employee new_employee);`
- `Boolean addPhoto( int empld, string photo);`

# **System Testing**

- ▶ Unit testing of each module was done after successfully completing the module. Each module was tested individually before integrating them with the whole system.
- ▶ After integrating each module with the system, integration testing was done in order to check if modules are working properly together.
- ▶ After completing all integrations, black-box testing of the whole system was carried out to ensure the system works in a correct manner.

# Black box testing of Major functions of the system

## ► **Log in to the system.**

Case 1: Invalid Username or password entered by the user.

Output: Error message on the screen saying “Invalid credentials”

Case 2: Valid credentials.

Output: The user is redirected to the Dashboard page.

## ► Update Profile

Case 1: username already exists.

Output: Error message on the screen saying “Username already exists”

Case 2: Some of required fields missing in input.

Output: Model validation errors will be displayed to the user.

Case 3: All input data are valid.

Output: Profile updated successfully.

## ► View Attendance.

Case 1: User is not logged in.

Output: Redirected to the login page with error message “Please login!”.

Case 2: If a user exists and has the attendance records.

Output: All the chat history will be displayed

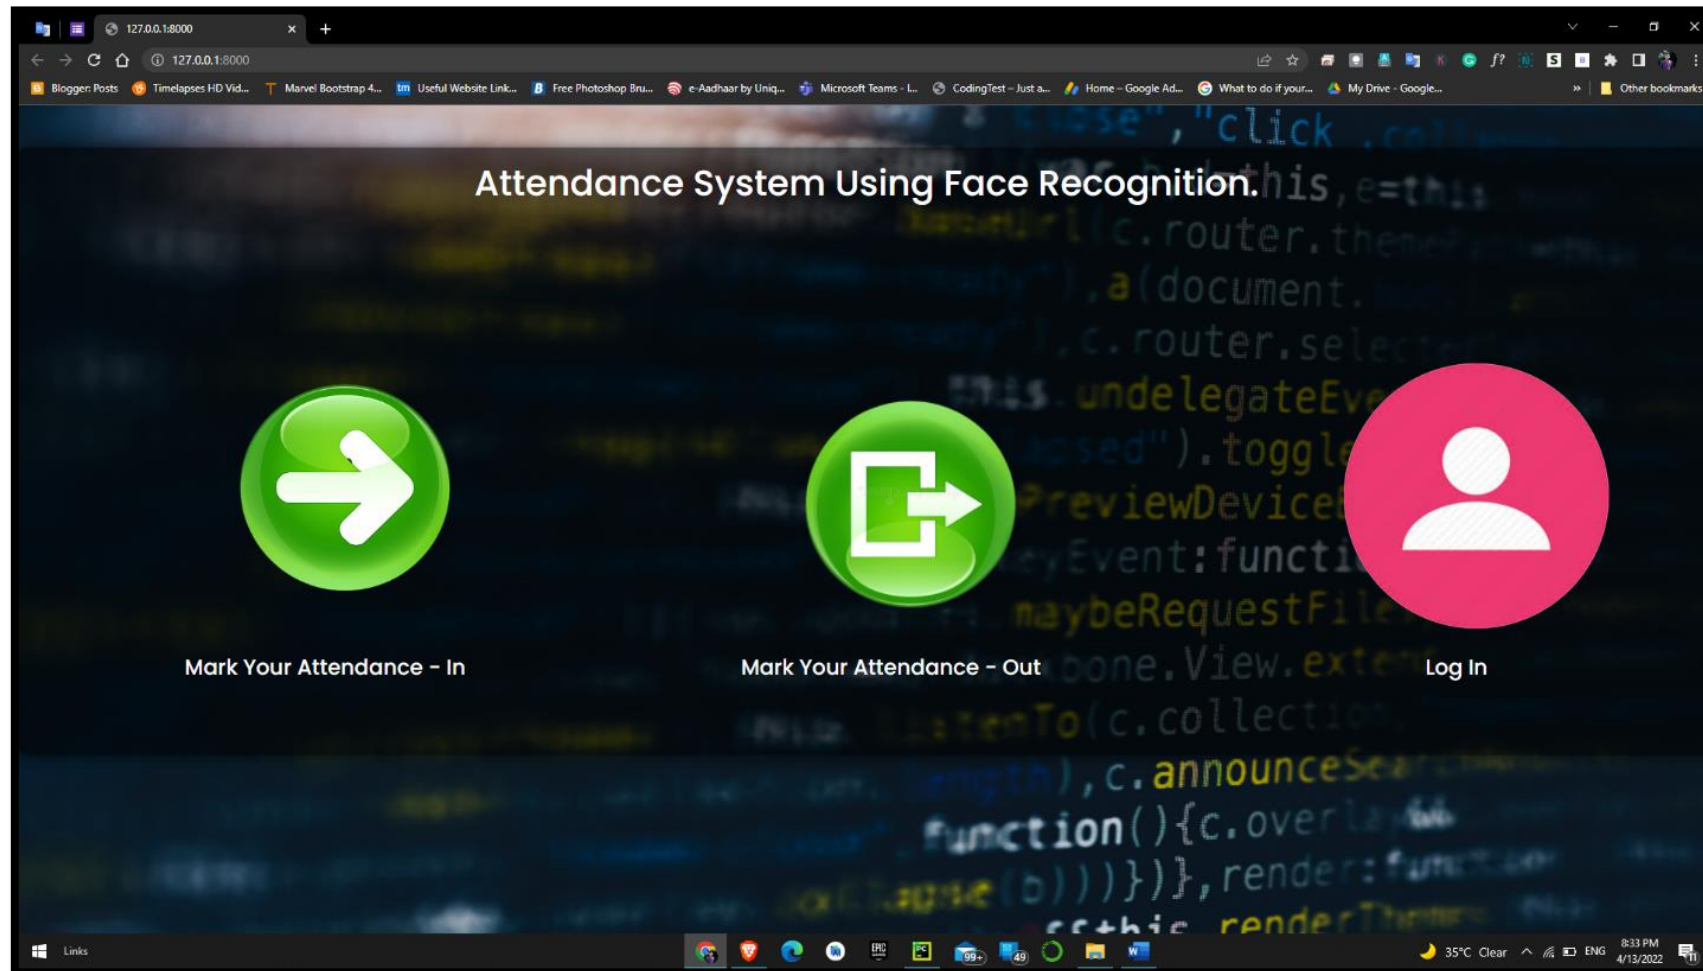

Case 3: Provided username does not exists in the system.

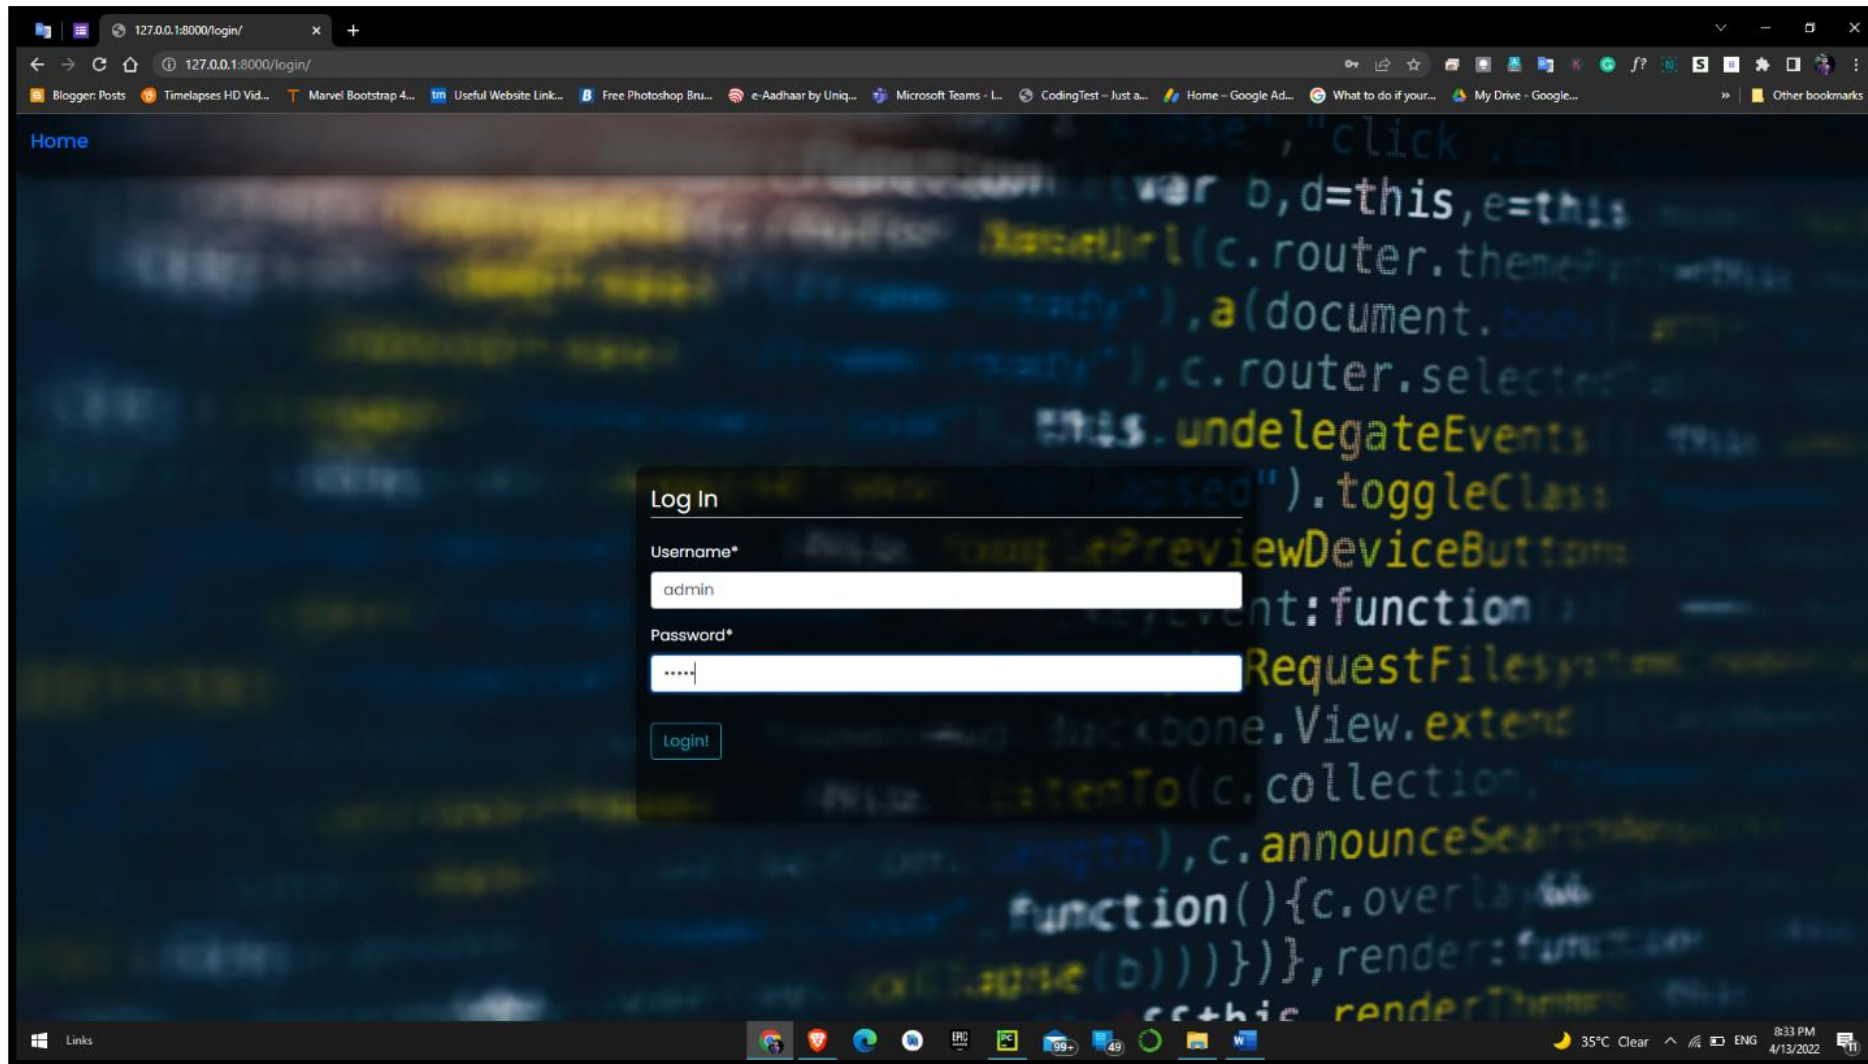

Output: 404 Error.

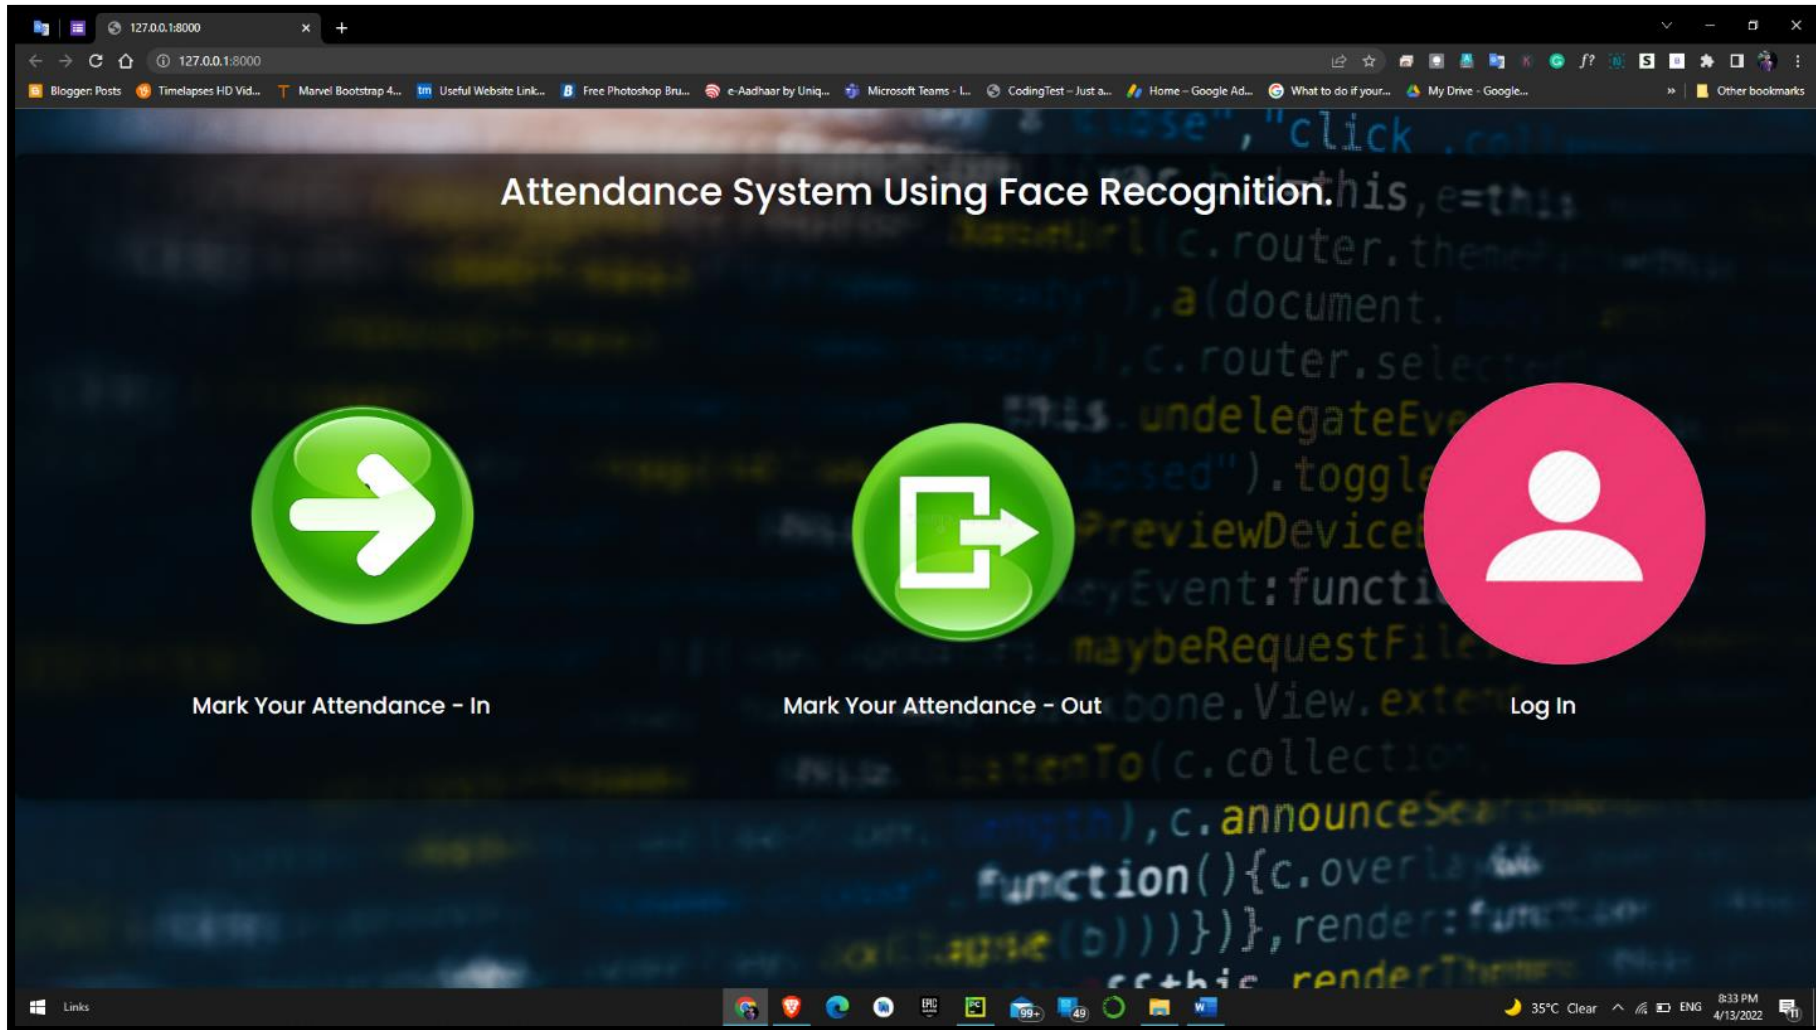

# Screenshots

## ► Login

# Mark my attendance In / Out

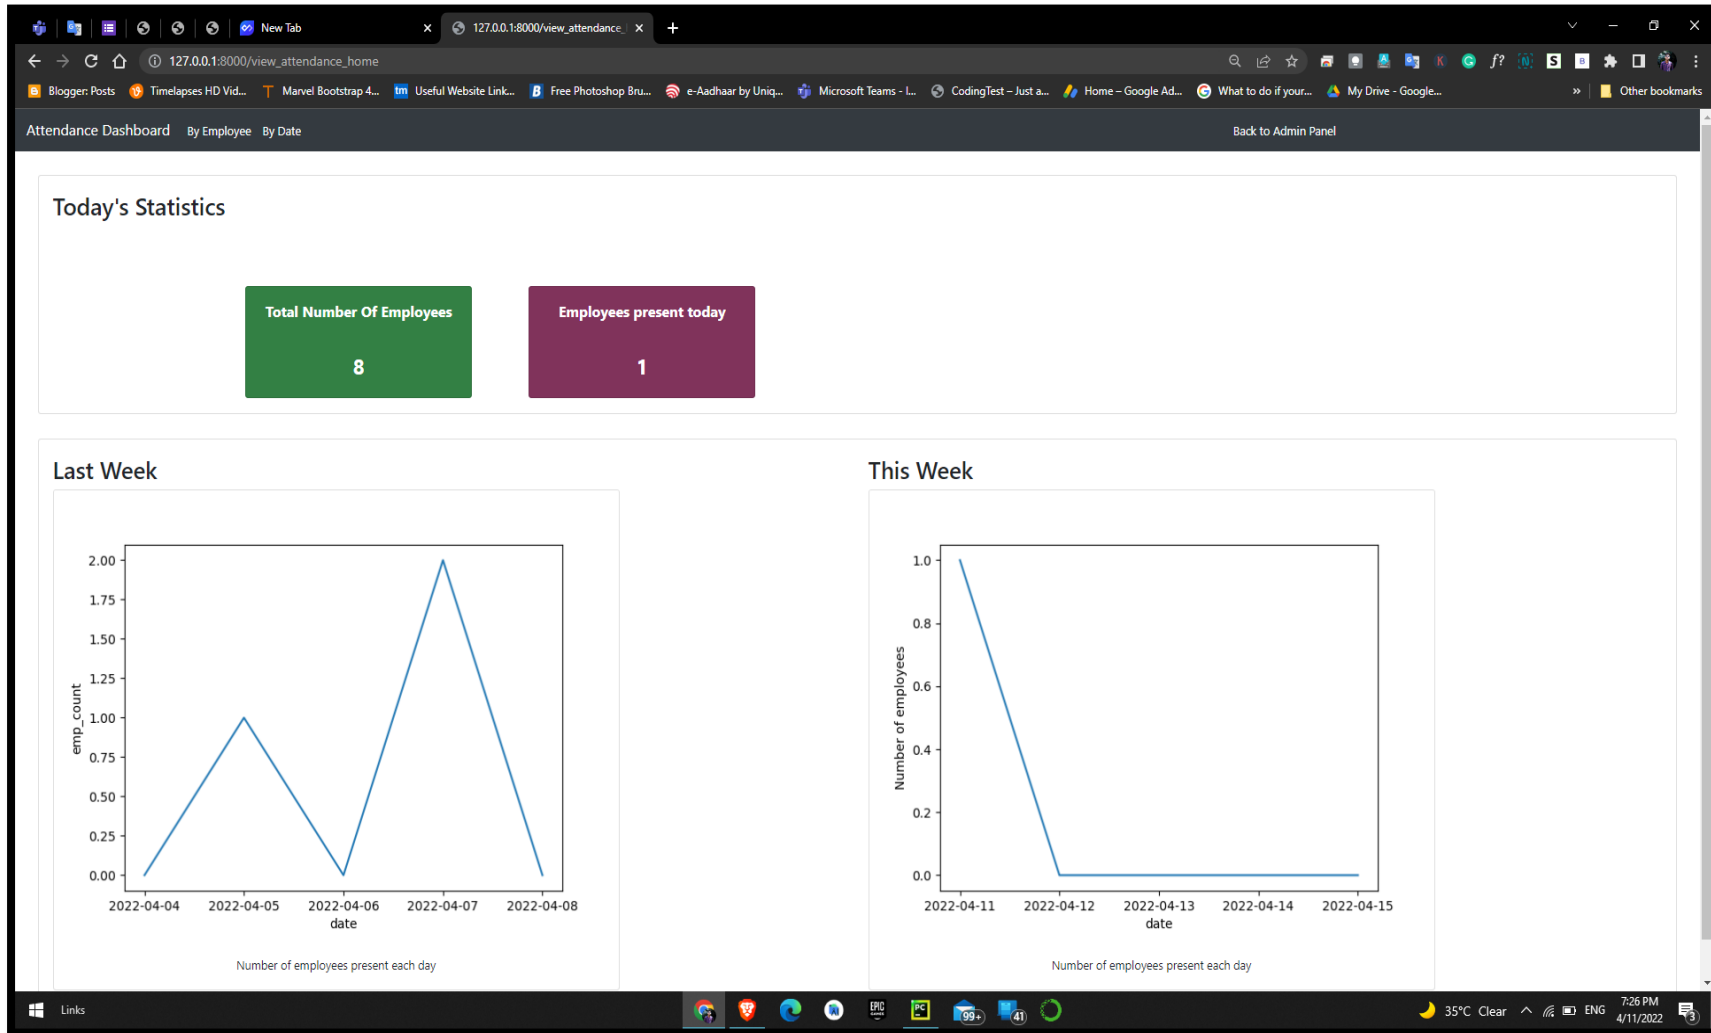

# Scanning Face

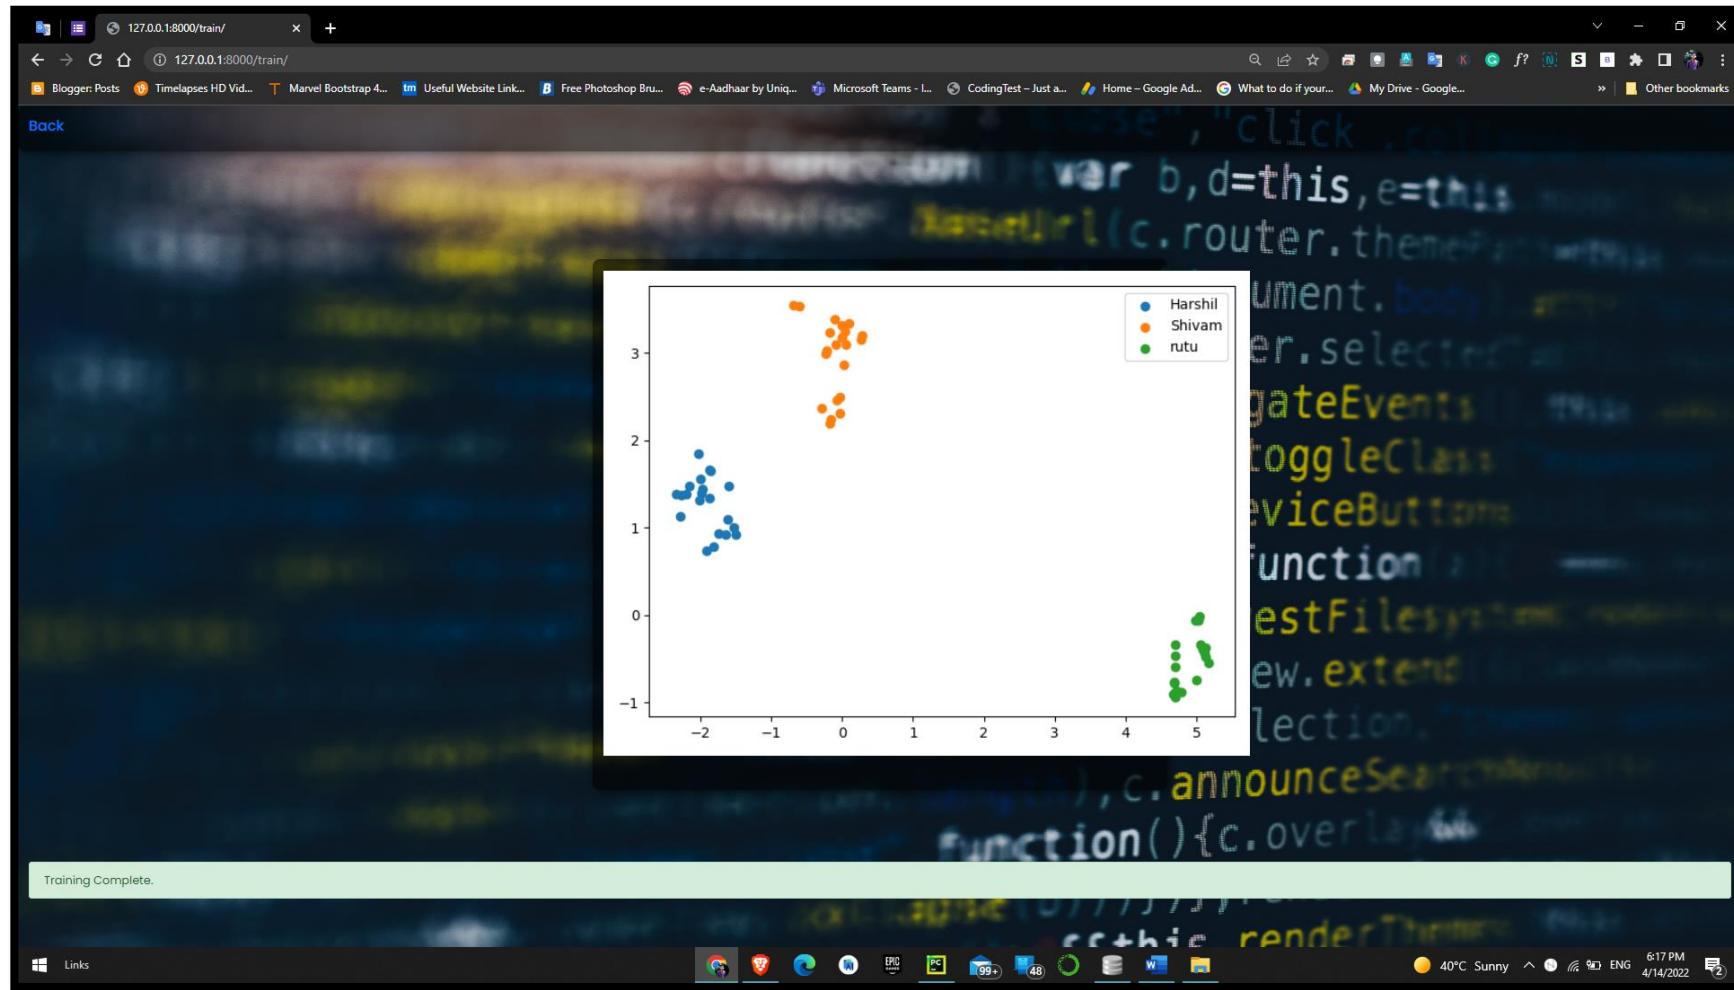

# View Attendance Records by Admin

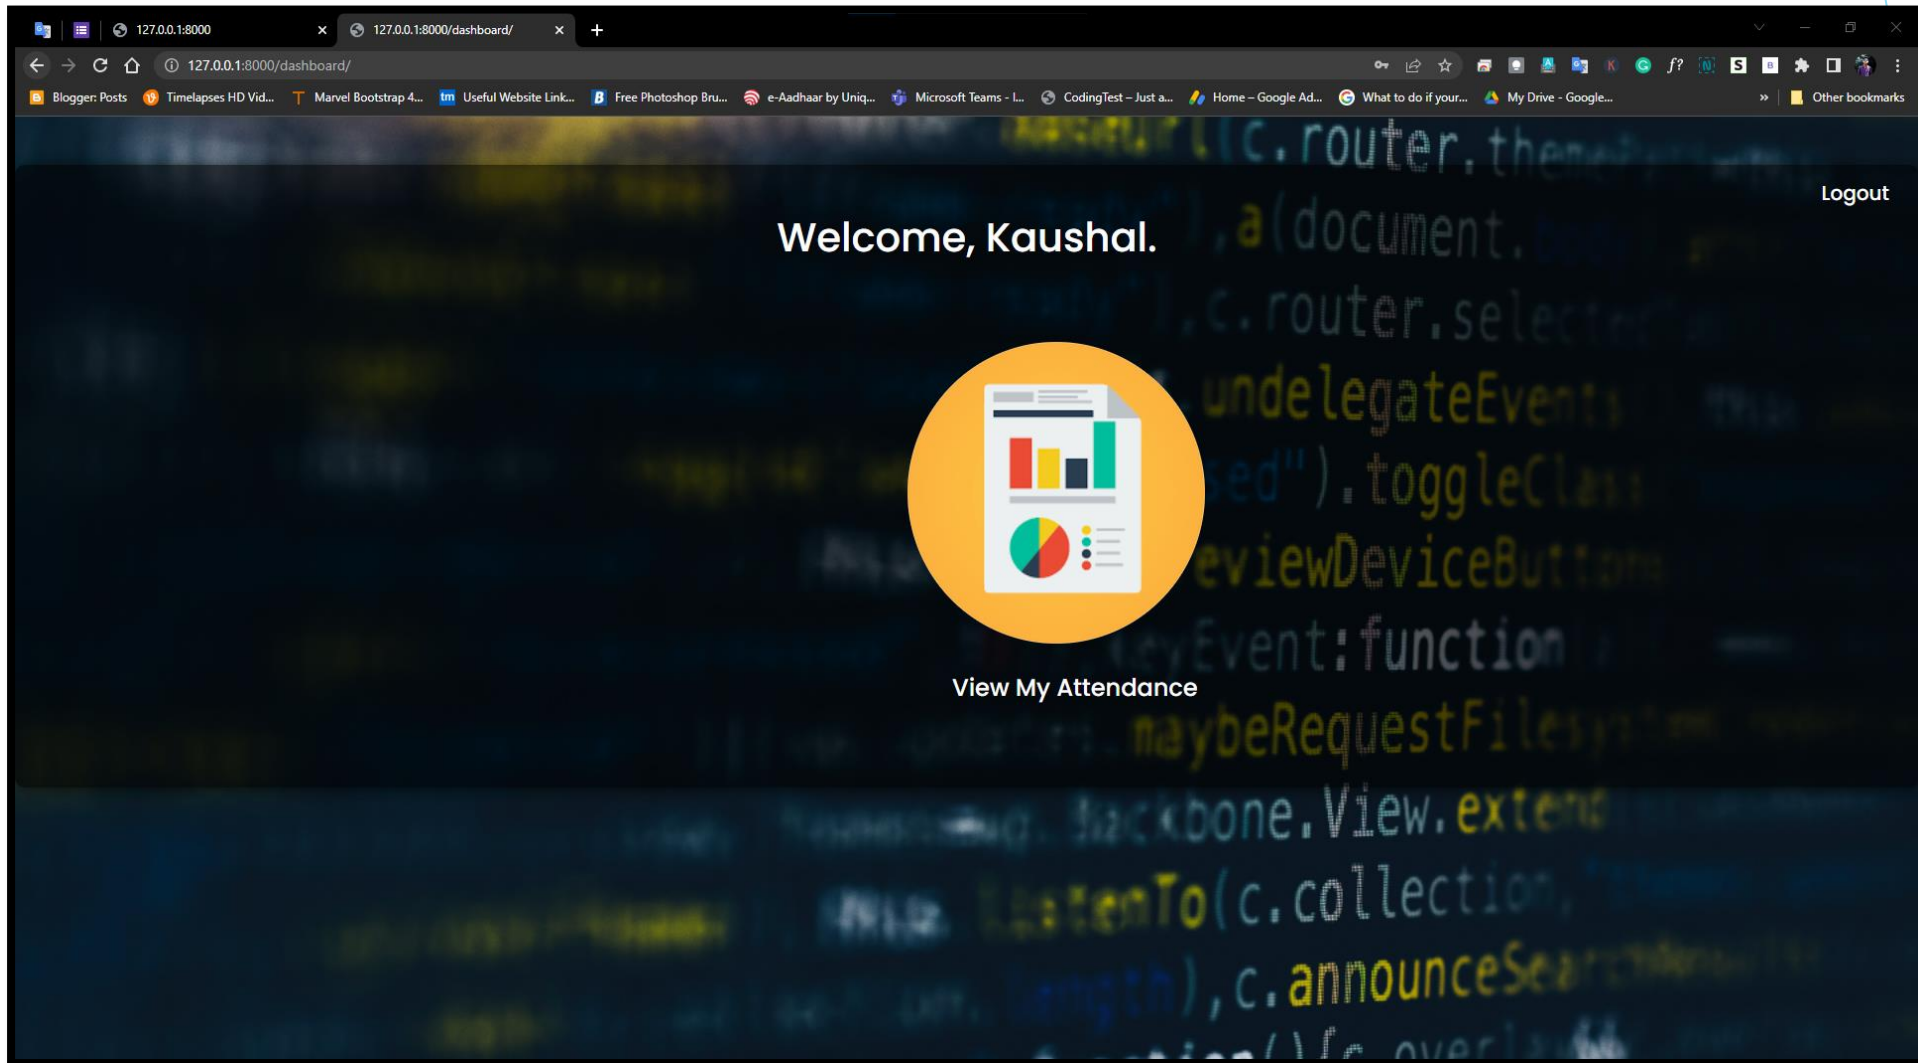

# Trained Dataset Output

# Add Photos

# Employee Dashboard

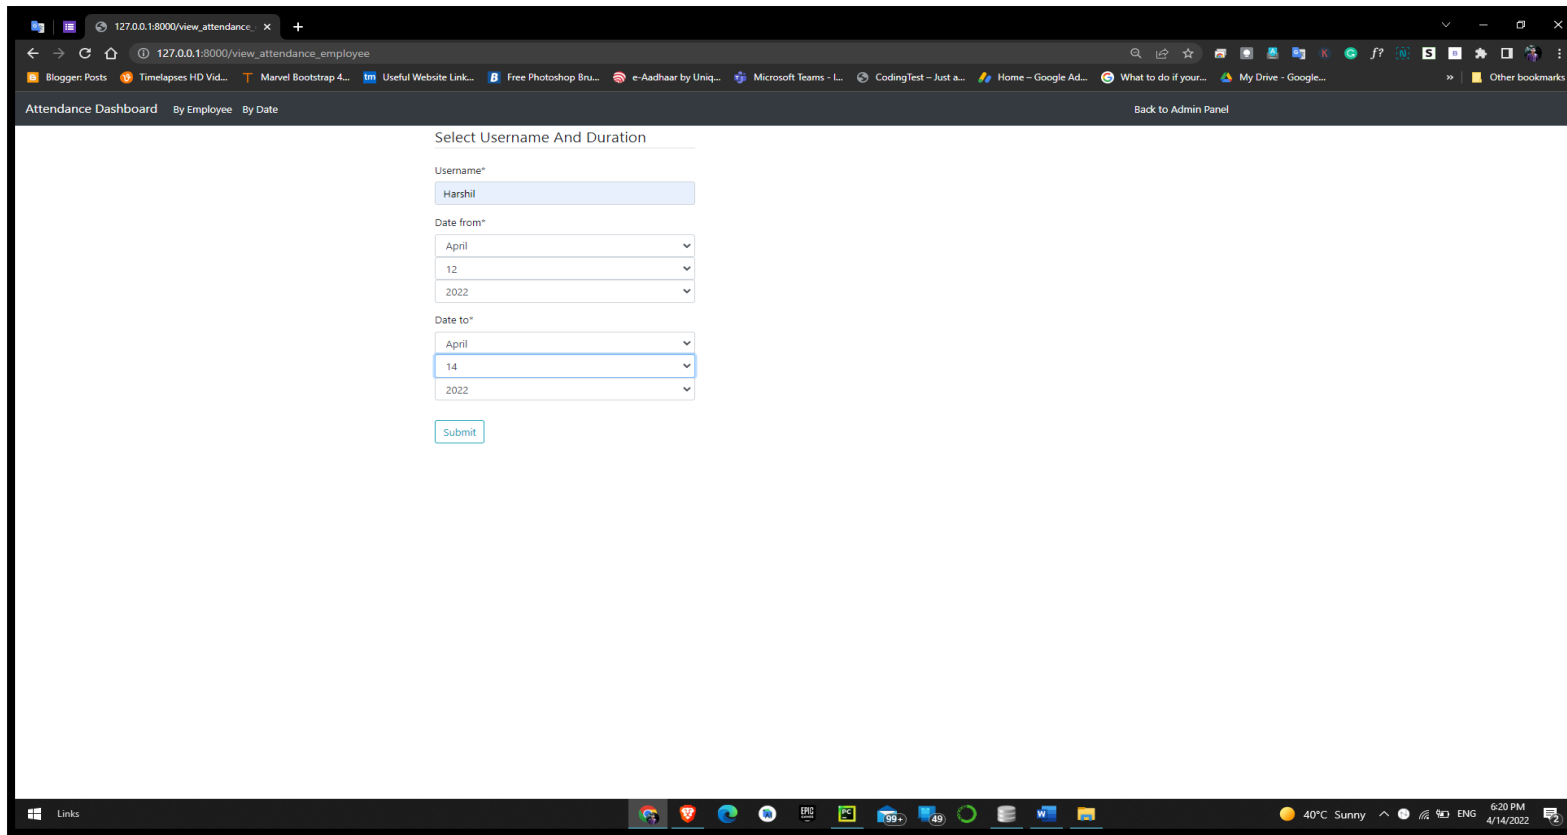

# View My Attendance By Employee

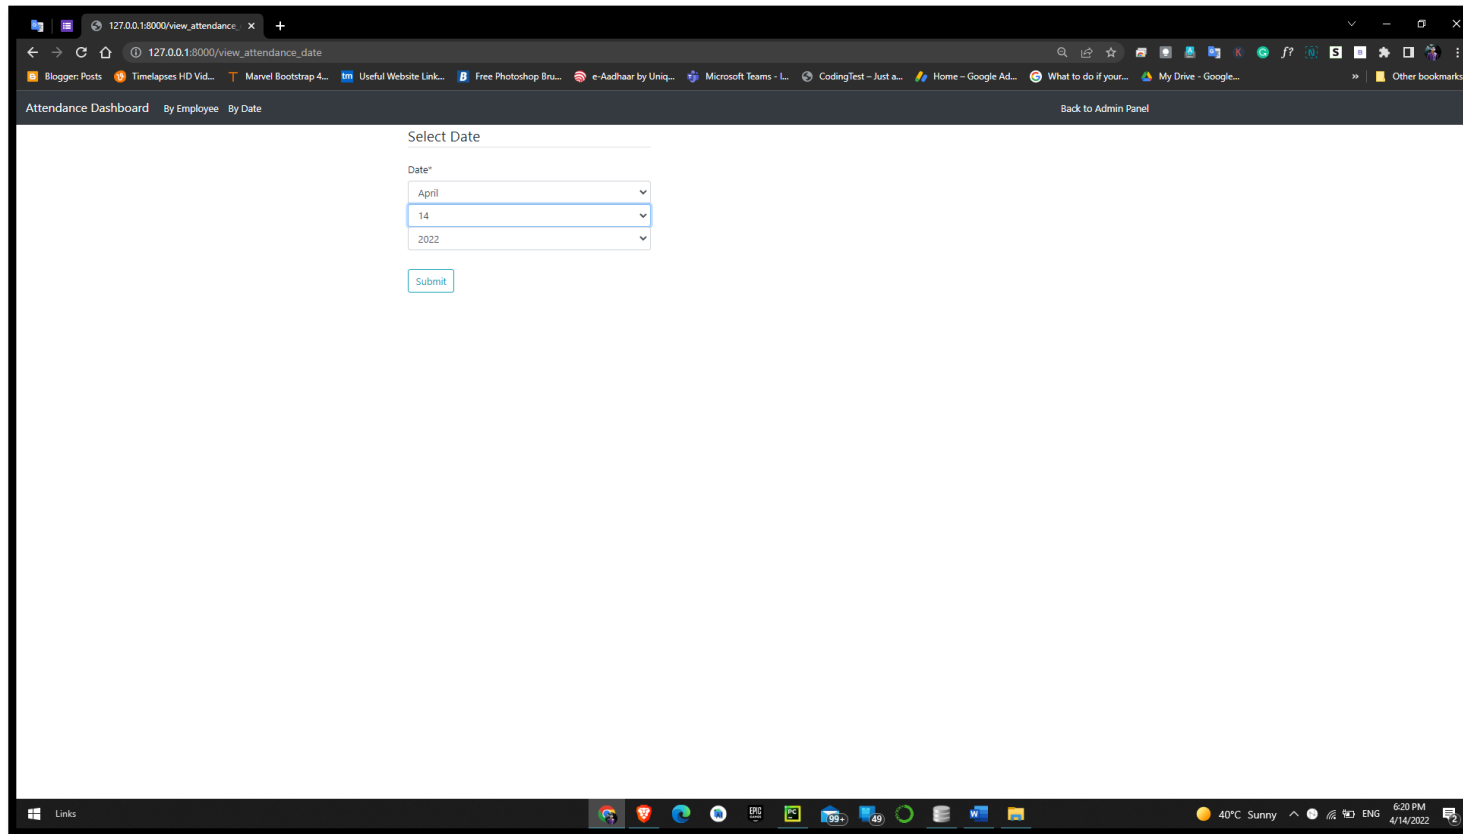

# Admin can filter attendance by employee / by date

The screenshot shows a web browser window with the URL `127.0.0.1:8000/view_attendance_employee`. The page has a dark header with the text "Attendance Dashboard" and navigation links "By Employee" and "By Date". A "Back to Admin Panel" link is also present. The main content area is titled "Select Username And Duration" and contains the following form elements:

- A "Username\*" label above a text input field containing the value "Harshil".
- A "Date from\*" label above a date picker with "April", "12", and "2022" selected.
- A "Date to\*" label above a date picker with "April", "14", and "2022" selected.
- A "Submit" button at the bottom of the form.

The browser's taskbar at the bottom shows the system clock as 6:20 PM on 4/14/2022, with a weather widget indicating 40°C and Sunny conditions.

# Conclusion

- ▶ Functionality implemented successfully
  - ▶ - Registration
  - ▶ - Login / Logout
  - ▶ - Manage User Profile
  - ▶ - View My Attendance
  - ▶ - View Attendance by Date
  - ▶ - View Attendance by Employee
  - ▶ - Manage Attendance
  - ▶ - Mark my attendance In
  - ▶ - Mark my attendance Out
  - ▶ - Add photos
  - ▶ - Add new employee
  - ▶ - Train the system
  - ▶ - View Attendance record by date
  - ▶ - View no. of employee present today
  - ▶ - View Total number of employees

# **Limitation and Future Enhancement**

# Limitation

- ▶ Attendance can be marked if the picture of an employee is shown. 300 images of each employee are taken for better accuracy. 20 Images per employee in a larger organization would consume a massive volume to store the images.
- ▶ The training time for our classifier takes about 20 seconds for each person. Hence for a large number of employees, it would take a very long time to train. Though training the classifier isn't something that needs to be frequently done, but it would be better if a classifier taking lesser time while maintaining the accuracy can be built.
- ▶ The current model is 99.38% Accurate

# Functionalities not implemented

- ▶ Alert System
- ▶ Forgot Password
- ▶ Email Notifications

# Possible future extensions

- ▶ A feature which can give intruder alert can be included in the system. Furthermore, the images of unknown people can be saved in an efficient manner and displayed in the system for better security.
- ▶ The number of training images can be reduced so that less storage is required. This can be done by removing duplicate images of the same person, or images with similar embeddings.
- ▶ The training time can be reduced by retraining the classifier only for the newly added images.
- ▶ A feature can be added where an employee is automatically sent a warning if his attendance or working hours are below the threshold.
- ▶ Wrongly classified images can be added to the training dataset with the correct label so as to increase the accuracy of the recognition model.
